

## Summary

PHP developer, Python enthusiast and evangelist with JavaScript skills.

I produce light and powerful interfaces for both users and developers thanks to techniques such as AJAX or the architectural pattern Model-View-Controller. I pay attention to maintainability, new ways of coding and keep working on software development techniques like Test-driven development and REST software architecture through a web application framework.

To build robust web applications, improve performance and avoid waste of time on important developments, I mainly use frameworks like Zend and Symfony (PHP) but also Django (Python). I really appreciate development teams who aim at providing original experiences to users.

## Education

- July 2009 Multimedia Bachelor degree  
Gobelins, l'école de l'image (Paris, France)
- July 2008 French University Diploma in Computer Sciences  
University of Paris Descartes (Paris, France)

## Languages

- French** mother tongue, speaker and writer
- English** operational speaker, technical knowledge and writer
- Spanish** academic

## Recent employment

- July 2010  **Ongaku (startup)**  
Nov. 2010 *Lead Developer / Architect*

Designing a maintainable thematic community website with reusable architecture and components via Django framework. Implementing a realtime chat by using NodeJS and Redis (persistent key-value database).

- Since 2009  **Gobelins, l'école de l'image (digital creative school)**  
*Trainer*

Introduction to PHP5 development, advanced development with PHP5.3 (namespaces, closures, etc.) through an ORM architecture presentation (namely Doctrine) and Symfony2 web framework.

- Nov. 2009  **Octave & Octave (web agency)**  
July 2010 *Web Developer*

Refactoring base code into reusable components in Centurion framework (a corporate full stack framework on top of Zend Framework). Applying strict code conventions and avoiding bad practices. Managing agency projects in a 3 developers team.

- April 2008  **FullSIX (web agency)**  
June 2009 *Engineer*

Managing agency projects such as: Twingo Total Perso, Lejaby, Vania, Playtex, etc. Encouraging migration from raw PHP to symfony1 web framework.

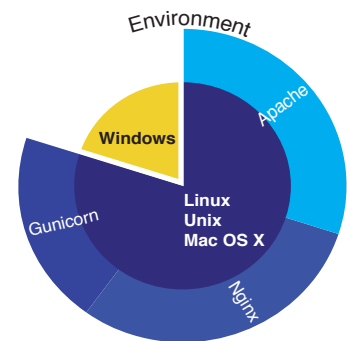

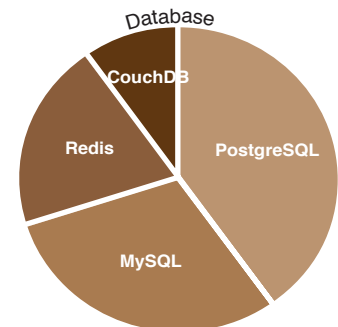

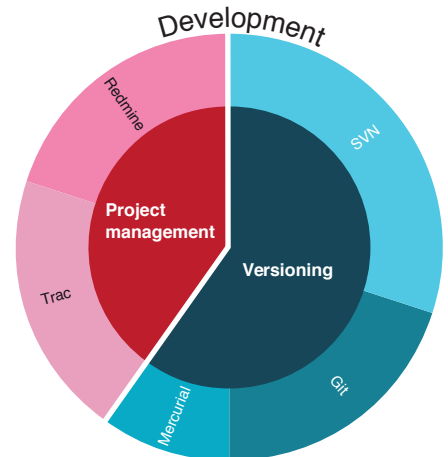

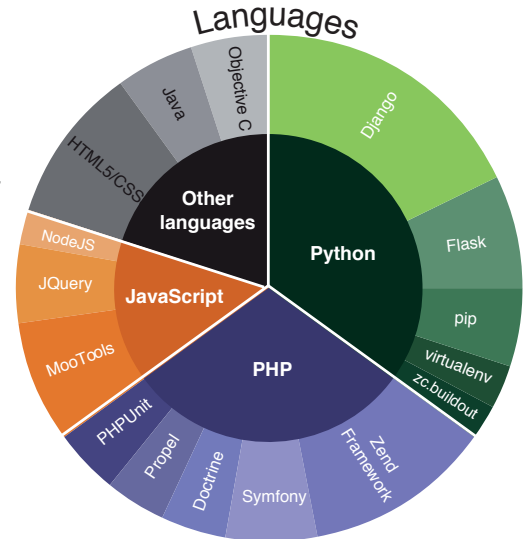

## Personal projects

 **#milkshape** is a collaborative creation experiment powered by Python/Django with AMF communications which brings users an online workshop and allows to produce huge participative creations.

**A plugged in life** is a technical weblog built in Python/Django about web development, new software architecture and web analysis.

## Specialities

## Interests

Comic books, participating in Open Source developments, thriller movies, high-tech devices, sports (badminton, volley-ball), screencasts (Vim, Starcraft).
